Chapter 1

Some small hints

1.1 References

Using the commands `\label{name}` and `\ref{name}` you are able to use references in your document. Advantage: You do not need to think about numerations, because \LaTeX is doing that for you.

For example, in section 1.2 on page 3 hints for dividing large documents are given.

Certainly, references do also work for tables, figures, formulas. . .

Please notice, that \LaTeX usually needs more than one run (mostly 2) to resolve those references correctly.

1.2 Dividing large Documents

You can divide your \LaTeX -Document into an arbitrary number of \TeX -Files to avoid too big and therefore unhandy files (e.g. one file for every chapter).

For this, you insert in your main file (this one) for every subfile the command `'\input{subfile}'`. This leads to the same behavior as if the content of the subfile would be at the place of the `\input`-Command.
